choose a **different path**

Nasal polyp reduction following the **SINUVA Way**

Your patients may benefit from a different path to nasal polyp reduction

Challenges of recommended treatment options for patients with nasal polyps:

<table>
<thead>
<tr>
<th>Topical intranasal corticosteroids</th>
<th>Saline nasal rinses</th>
<th>Oral corticosteroids</th>
</tr>
</thead>
<tbody>
<tr>
<td>~60% of the active drug in a metered dose of nasal steroid spray is removed by mucociliary clearance within 15 minutes</td>
<td>Compared directly with topical nasal steroids, the benefits of saline irrigation alone are less pronounced</td>
<td>Regardless of dosage and length of treatment, oral corticosteroids carry known safety concerns associated with chronic systemic exposure</td>
</tr>
<tr>
<td>Only 32.7% of patients use intranasal corticosteroids as directed</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Patients who fail to achieve nasal polyp symptom relief with medical management turn to endoscopic sinus surgery

- Patients with nasal polyps require revision endoscopic sinus surgery more frequently than patients with chronic sinusitis who do not have polyps\(^5,6\)
  - Despite surgery, polyp recurrence was 35% at 6 months and 40% at 18 months\(^7\)

Choosing an alternative path to current nasal polyp treatment options with **SINUVA**

Which of your patients may benefit from **SINUVA**?\(^8\) Patients ≥ 18 years of age who:

- Had previous ethmoid sinus surgery
- Have nasal polyps

**SINUVA** may be considered in patients with nasal polyps who experience the following after ethmoid sinus surgery:\(^8\):

- Recalcitrant nasal polyps
- Postsurgical nasal polyps
- Reduction, impaired, or loss of smell

- Polypoid edema
- Asthma, allergic rhinitis
- Surgery fatigue

**INDICATION**

**SINUVA** Sinus Implant is a corticosteroid-eluting (mometasone furoate) implant indicated for the treatment of nasal polyps, in patients ≥ 18 years of age who have had ethmoid sinus surgery.

**IMPORTANT SAFETY INFORMATION**

**CONTRAINDICATIONS**

Patients with known hypersensitivity to mometasone furoate and any of the ingredients of the **SINUVA** Sinus Implant.

Please see additional Important Safety Information on the next page.
Key benefits of SINUVA

SINUVA is a novel implant with a 2-in-1 mechanism that offers patients with nasal polyps symptom relief via:

- Targeted delivery of 1350 μg of mometasone furoate to the ethmoid nasal polyps
- Self-expanding, bioabsorbable design that softens over time
- Continuous delivery of mometasone furoate over the course of 90 days
- Localized drug delivery that minimizes reliance on patient compliance
- A non-surgical, in-office procedure with local anesthesia

IMPORTANT SAFETY INFORMATION (continued)

WARNINGS AND PRECAUTIONS

Local Effects: Monitor nasal mucosa adjacent to the SINUVA Sinus Implant for any signs of bleeding (epistaxis), irritation, infection, or perforation. Avoid use in patients with nasal ulcers or trauma.

Ocular Effects: Monitor patients with a change in vision or with a history of increased intraocular pressure, glaucoma, and/or cataracts closely.

Hypersensitivity Reactions: Hypersensitivity reactions, including rash, pruritus, and angioedema have been reported with the use of corticosteroids.

Immunosuppression: Persons who are using drugs that suppress the immune system are more susceptible to infections than healthy individuals. Corticosteroids should be used with caution, if at all, in patients with active or quiescent tuberculosis infection of the respiratory tract; untreated systemic fungal, bacterial, viral, or parasitic infections; or ocular herpes simplex.

Hypercorticism and Adrenal Suppression: If corticosteroid effects such as hypercorticism and adrenal suppression appear in patients, consider sinus implant removal.

ADVERSE REACTIONS

The most common adverse reactions observed (> 1% of subjects and that occurred more frequently in the treatment group compared to control) in clinical studies were asthma, headache, epistaxis, presyncope, bronchitis, otitis media, and nasopharyngitis.

POSTMARKETING EXPERIENCE

The following adverse reactions have been identified during post-approval use of the SINUVA sinus implant. These events include implant migration, lack of efficacy, nasal pain, headache, epistaxis.

Rx only. Please see accompanying Full Prescribing Information for SINUVA or at SINUVA.com/hcp.
